

## Seasons Exploration

### Activity Overview

When your students visit LEGOLAND® Discovery Center, they will be using LEGO® bricks to build a model of their favorite seasonal activity. To prepare your young learners for their field trip activity, we recommend a brainstorm race, which is a great way to gauge their understanding of the different seasons and to get them energized about what's to come. During this activity, students race to brainstorm and list as many seasonal activities as they can in a certain amount of time!

### Setting the Scene

Talk with students about the current season of the year. What are specific things that the students see, feel, smell, do, or eat during this season?

### Instructions

For this activity, ask your students to think of different activities that take place around them during this season. They will have five minutes (or however long works best for your class) to brainstorm and create a list of as many seasonal activities as they can come up with.

Keep a running list of correct answers on the board and take the opportunity to correct and talk through any mistakes the teams might suggest. To add extra interest, set a classroom goal for a set number of activities to be listed in a specific time period.

**Grades:**  
Pre-K-1

**Activity Time:**  
20-30 minutes
